**Groundsure Planning** provides detailed planning application information within the vicinity of the property, dating back 10 years. Our Planning report utilises the most accurate, comprehensive and complete commercially available historical and current planning data provided by Glenigan.

An essential part of a conveyancer’s due diligence in a residential transaction is highlighting the likely planning and development changes within the locality. Standard searches won’t always obtain full information such as historical planning applications, land use changes and neighbourhood insight which could have significant impacts on the future valuation and enjoyment of a property.

Planning applications fall under 3 categories: large, small and house extensions/small new builds. To ensure results are relevant, the search radius used will vary depending on whether the property is located in a rural, urban or mega-urban environments.

The report now uses Land Registry polygons for accurate site boundaries and includes new data including Air Quality Management Areas and modelled data, neighbourhood information and planning restrictions such as Listed Buildings and Building Conservation Areas. Its complete planning information enables informed property decisions.
